

Have Painful Sex?

Suffer From Constant Vaginal Burning and/or Itching?

Lichen Sclerosus (LS), A Painful Auto Immune Skin Disease Attacks Genitals

Dr. Nathan Newman Announces Stem Cell Lift®

Provides Patients Immediate Relief from LS Symptoms

(Beverly Hills, CA)- Nathan Newman, MD, Board Certified Dermatologist, Cosmetic Surgeon and innovator of the Stem Cell Lift®, is on the cutting-edge of the revolutionary advancements in stem cell therapy. He is providing an array of new, safe and effective treatment options for many conditions, such as **Lichen Sclerosus et atrophicus (LS)**. **LS** is an auto immune skin disease that attacks the male and female genital area, and usually causes painful sex and severe discomfort from burning and itching to the vagina and male genitals. The Stem Cell Lift® is showing promising results in often providing immediate relief to patients suffering from LS. Until the application of the Stem Cell Lift®, there has been *no known effective treatment*, which would provide any long term relief to the debilitating symptoms of LS. www.stem-cell-lift.com

Dr. Newman's proprietary Stem Cell Lift® delivers an enhanced amount of stem cells found in the patient's own fat to the affected areas. The stem cells have the ability to reduce inflammation, improve circulation, and repair damaged cells and tissue, thereby providing almost immediate relief to this devastating condition.

Many women who have LS can't, or are afraid to have intercourse, as it is often too painful. Paula, a 34-year old female, LS patient, endured 7 years of unending suffering and countless visits to numerous specialists. They merely prescribed her topical treatments that only gave her temporary relief from her devastating symptoms. Then she met Dr. Newman and had the Stem Cell Lift®. Thrilled with the immediate, positive results, Paula remarks, "The constant, intense, sensitive burning that I had had every single day for a year or more, was gone the very next morning. It was gone and it's never come back."

While prevalent in women of all ages, LS appears more prominently in post-menopausal women, (1 in 30) as well as men and some children. The disease is often misdiagnosed, enabling the symptoms to progress and worsen, often for many years. Even with a correct diagnosis, to date medical treatments for LS have been limited to strong corticosteroid ointments, which merely provide temporary relief of the itching and discomfort similar to a chronic yeast infection.

The Stem Cell Lift® offers new hope for relief, often immediate, from the painful symptoms of this condition. The stem cells may also help stop the progression of the disease through their ability to inhibit the body's immune system from attacking itself.

Patients treated with the Stem Cell Lift® confirm that they experience fewer flare ups, which are shorter in duration. Post-Stem Cell Lift®, most patients are able to discontinue the use of topical steroids and hormones and many are able to resume intimacy.

States Dr. Newman, "I hope to raise public awareness of this debilitating disease and inform patients that with the advent of the Stem Cell Lift®, new treatment options are now available to LS patients."

About Dr. Nathan Newman:

A Board Certified Dermatologist, Cosmetic Surgeon and a pioneer in the field of regenerative medicine, Dr. Nathan Newman has been researching and working with adult stem cells for nearly a decade. He is renowned for his ground-breaking Stem Cell Lift®, a knife-free, scar-free face lift that restores a 3-dimensional, youthful appearance by adding volume to the face with injections of super-charged stem cells. His proprietary procedure significantly increases the number of stem cells extracted from the patient's own fat and added back to the fat that is then injected into the face, hands, breasts, buttocks and calves for rejuvenation and/or augmentation.

On the cutting-edge of stem cell research and therapies, Dr. Newman also uses the Stem Cell Lift® procedure to: repair and/or restore anatomical defects resulting from cancer surgery; repair injured or aging joints with stem cell injections; treat and provide relief to patients who are suffering from Lichen Sclerosus, a debilitating, autoimmune skin disease.
